ETL

	Citizen Integrator	ETL Specialist
Easy to use	Designed for anyone that understands the data - from the analyst to the developer.	Requires years of professional data experience to how to work with the ETL tools and platforms
Pre-built partner connectors	Partner Defined Connectors Approved and certified by partners for integration.	On Your Own There are no pre-built partner connectors for ETL.
Code Free & Reusable	Configuration Driven Reusable pre-built configuration based connectors .	Build Your Code Build every integration end-point every time.
Unified API Management	Unified Normalized and consistent API's across our entire ecosystem.	3rd Party Application Needed Requires a 3rd party tool.

ESB

	Provided	On Your Own
End Point Maintenance	Dedicated internal teams who ensure end point maintenance, versioning and vendor compliance so you don't have to.	Your developers are required to manage every update from the vendors and then for it to be retested end to end.
	Many to Many	Point to Point
Scalable Architecture	Re-use existing connectors and integrations to get instant scale across multiple environments.	Each integration is a source to target integration that must be restarted with each new application.
	Open API	Closed
Open Developer Environment	The environment is open to be integrated into other environments by an exposed service set for quick drag and drop.	Massive 500-900MB proprietary SDK's with deep proprietary vendor specific knowledge is required.
	In Application Use	Nothing
Native Vendor Integrations	Leverage the integrations right inside of the application.	Build your own if possible.
	Data Process Orchestration	3rd Party Application Needed
Embedded Orchestration	Cross data process orchestration embedded into the platform management function	Requires a 3rd party tool.
	Reporting, Analytics and Notifications	3rd Party Application Needed
Embedded Data Governance	End to end data governance, lineage and exception management available at all times to manage quality and compliance.	Requires multiple 3rd party tools.
	Complete Data Services	3rd Party Application Needed
Complete Data Services	Data preparation, normalization, profiling and staging included in the solution	Requires multiple 3rd party tools.
Hundreds of Pre-Built Connectors	340+	10-50
	Scalable and Flexible	Locked - All In
Pricing Model	Pricing that scales with use, by component and type of use. On-demand with multi-deployment models for cloud, private cloud and on-premise	All or nothing models plus developer teams needed to use it. Requires on premise deployment or hybrid to address incomplete roadmap
