

Business automation scenarios

Put it Forward® is the solution that Jira® users look to for help in running effective projects through Workfront®. This lets a user keep both project managers and developers in the conversation and sharpen targeted execution across the enterprise.

Common Scenarios:

- Bi-directional project sync between Workfront® and Jira®
- Jira® 3rd party app integration with Workfront®
- Process and task mining for optimization
- Keep project teams, activities, tasks, comments and documents in sync
- Centralized activity management across processes and projects
- Customized work-flow and process improvement
- Integrated reporting and project analytics
- Enhance forecasting models and reporting with deeper views of your team tasks
- Multi Jira® and Workfront® environment integration

How it works

Put It Forward works with your best of breed and custom solutions by working through a centralized platform.

How to start:

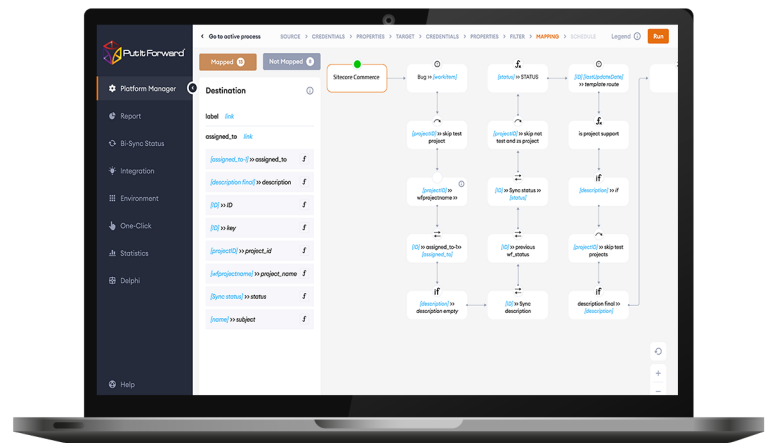

1. Choose your connector then authenticate to the selected system in the Integration Designer
2. Design your process steps and insert business rules to control what happens when data flows
3. Select the execution frequency from real time to intraday to event based - then select the start button

Platform features and capabilities

A single platform for integration, process automation, predictive insights and analytics

- No code solution
- Best of breed solution and process orchestration
- End to end process observability and traceability
- Onboard business rule, data transformation and event configuration management
- Integrated data analytics and data science tools
- Embedded data governance and control
- Hundreds of available connectors
- Cloud based and on-premise deployment options
- Multi-layer integrated security including SSO
